

Triumph acquires Forberg designs

Triumph Engineering Co, Thailand's largest manufacturer of animal feed machinery and equipment, is looking to expand its business worldwide through its newly acquired rights to utilise Forberg designs.

Triumph signed an agreement with Halvor Forberg, former owner of Forberg and the inventor of Forberg's mixers and vacuum coaters, for the purchase of Forberg's mixer and vacuum coater designs.

The agreement allows Triumph to manufacture mixers and vacuum coaters based on Forberg's designs or modified versions thereof based on customer requirements. The machines will be sold under the brand name of Triumph-Forberg.

"This will be a stepping stone for us to supply and service mixers and vacuum coaters worldwide, since Forberg's machines are widely used," said Triumph

Administration Manager Saovapak Kositkhun.

"By acquiring Forberg's mixer designs, we will be able to expand our product lines and become more active in all mixing applications. We also provide maintenance services for current users of Forberg's mixers and vacuum coaters."

Forberg mixers are of a double-shaft design, meaning they have two mixing shafts for better mixing performance and higher throughput. All ingredients are processed into a homogeneous mix within the shortest times. During the mixing process, all particles are in continuous movement by paddle action, which reduces mixing time and enhances the uniformity of the compound feed.

The mixers are applicable to various feed,

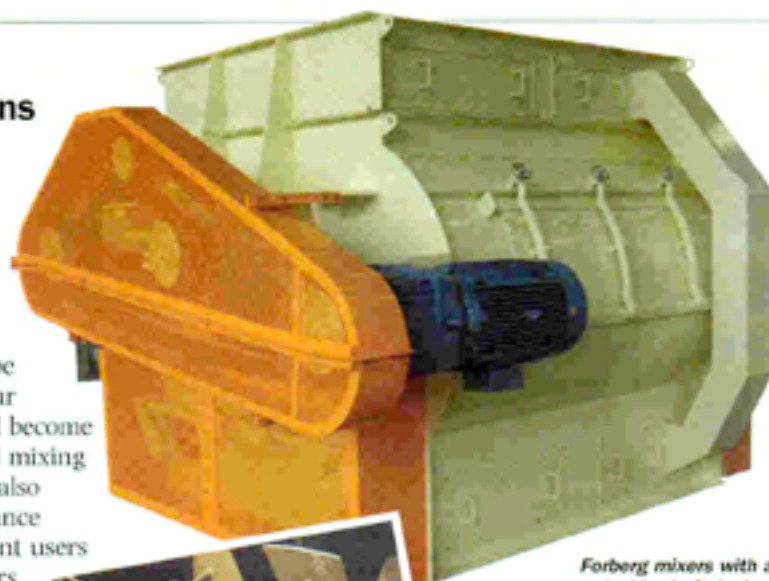

food and chemical processing industries.

Triumph currently manufactures pelleting machines, grinding machines, intake and material handling machines and mixers for feed producers. In addition to machinery and parts supply, the company also provides plant design, turnkey construction, and

maintenance services.

According to Ms Saovapak, the production of the first Triumph-Forberg mixer and vacuum coater will be completed soon. The machines will be supplied to livestock feed producers in Thailand.

Ms Saovapak said Triumph has a solid reputation in international markets, supplying machinery to Malaysia, Vietnam and the U.S. The company is also expanding into Korea and Japan.
