

## Triumph gaining ground in Asia

Triumph Engineering of Thailand featured pellet mills with extra long feed conditioner at the show.

Among the outstanding features of Triumph's pellet mills is the feed conditioner with multi-steam inlet ports, for better cooking of feed and better pellet quality, that contribute to improved digestibility.

Specially forged stainless steel paddles, which ensure long operation life, can be set in different angles to meet the required mixing and retention time.

The company has received many orders from producers in Bangladesh, Malaysia, the Philippines, Thailand and Vietnam, said Sukadej Suksathaporn, Feedmill Design Department Manager.
